Source: Urban-Brookings Tax Policy Center Microsimulation Model (version 0305-3A).
(1) Calendar year. Baseline is extended law with the extension of the 2005 AMT exemption levels ( $\$ 58,000$ for married couples and $\$ 40,250$ for singles and heads of household), indexed for inflation after 2005; allowance of personal non-refundable credits regardless of tentative AMT; and extending the non-refundable credit for elective deferrals and IRA contributions (the "saver's credit"). Proposal includes extending but limiting the individual income tax cuts due to the following provisions in EGTRRA, JGTRRA, and WFTRA to $\$ 10,000$ (indexed for inflation after 2007): marginal tax rates; the 10 percent bracket; the child tax credit; the child and dependent care credit; the standard deduction, 15-percent bracket, and EITC for married couples; tax rates on long-term capital gains and dividends; pension and IRA provisions; expansion of student loan interest deduction (excludes other education provisions). The effect of these provisions is measured against a current-law baseline with the extension of the 2000 AMT exemption levels ( $\$ 45,000$ for married couples and $\$ 33,750$ for singles and heads of household), indexed for inflation after 2000; and allowance of personal non-refundable credits regardless of tentative AMT
(2) Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see
http://www.taxpolicycenter.org/TaxModel/income.cfm
(3) Includes both filing and non-filing units. Tax units that are dependents of other taxpayers are excluded from the analysis,
(4) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.
(5) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.
