

## **What are the tax benefits of homeownership?**

The main tax benefit of owning a house is that the imputed rental income homeowners receive is not taxed. Although that income is not taxed, homeowners still may deduct mortgage interest and property tax payments as well as certain other expenses from their federal taxable income. Additionally, homeowners may exclude, up to a limit, the capital gain they realize from the sale of a home.

### **OVERVIEW**

The tax code provides a number of benefits for people who own their homes. The main benefit is that the owners do not pay taxes on the imputed rental income from their own homes. They do not have to count the rental value of their homes as taxable income, even though that value is just as much a return on investment as are stock dividends or interest on a savings account. It is a form of income that is not taxed.

Homeowners may deduct both mortgage interest and property tax payments as well as certain other expenses from their federal income tax. In a well-functioning income tax, all income would be taxable and all costs of earning that income would be deductible. Thus, in a well-functioning income tax, there should be deductions for mortgage interest and property taxes. However, our current system does not tax the imputed rental income that homeowners receive, so the justification for giving a deduction for the costs of earning that income is not clear.

Finally, homeowners may exclude, up to a limit, the capital gain they realize from the sale of a home. All of these benefits are worth more to taxpayers in higher-income tax brackets than to those in lower brackets.

### **MORTGAGE INTEREST DEDUCTION**

Homeowners who itemize deductions may reduce their taxable income by deducting any interest paid on a home mortgage. The deduction is limited to interest paid on up to \$1 million of debt incurred to purchase or substantially rehabilitate a home. Homeowners also may deduct interest paid on up to \$100,000 of home equity debt, regardless of how they use the borrowed funds. Taxpayers who do not own their

home have no comparable ability to deduct interest paid on debt incurred to purchase goods and services.

The Tax Policy Center (TPC) estimates that 20 percent of all tax units will benefit from the deduction in 2015. The congressional Joint Committee on Taxation (JCT) estimated that the mortgage interest deduction will cost the federal government almost \$75 billion in lost revenue in fiscal year 2015.

## **PROPERTY TAX DEDUCTION**

Homeowners who itemize deductions may also reduce their taxable income by deducting property taxes they pay on their homes. That deduction is effectively a transfer of federal funds to jurisdictions that impose a property tax (mostly local but also some state governments), allowing them to raise property tax revenue at a lower cost to their constituents. The JCT estimated that the deduction saved millions of homeowners a total of \$34 billion in income tax in fiscal year 2015.

## **IMPUTED RENT**

Buying a home is an investment, part of the returns from which is the opportunity to live in the home rent-free. Unlike returns from other investments, the return on homeownership—what economists call “imputed rent”—is excluded from taxable income. In contrast, landlords must count as income the rent they receive, and renters may not deduct the rent they pay. A homeowner is effectively both landlord and renter, but the tax code treats homeowners the same as renters while ignoring their simultaneous role as their own landlords. The Office of Management and Budget estimates that the exclusion of imputed rent reduced federal revenue by nearly \$79 billion in fiscal year 2015.

## **PROFITS FROM HOME SALES**

Taxpayers who sell assets must generally pay capital gains tax on any profits made on the sale. But homeowners may exclude from taxable income up to \$250,000 (\$500,000 for joint filers) of capital gains on the sale of their home if they satisfy certain criteria: they must have maintained the home as their principal residence in two out of the preceding five years, and they generally may not have claimed the capital gains exclusion for the sale of another home during the previous two years. The JCT

estimated that the exclusion provision saved homeowners more than \$27 billion in income tax in fiscal 2015.

## EFFECT OF DEDUCTIONS AND EXCLUSIONS

The deductions and exclusions available to homeowners are worth more to taxpayers in higher tax brackets than to those in lower brackets. For example, deducting \$2,000 for property taxes paid saves a taxpayer in the 39.6 percent top tax bracket \$792, but saves a taxpayer in the 15 percent bracket only \$300. Additionally, even though they only represent about 20 percent of all tax units, those with more than \$100,000 in income receive over 85 percent of the mortgage interest deduction tax benefits. That difference results largely from three factors: compared with lower-income homeowners, those with higher incomes face higher marginal tax rates, typically pay more mortgage interest and property tax, and are more likely to itemize deductions on their tax returns.
