[1] "Income tax" includes the "alternative minimum tax," and is after subtraction of all tax credits except a portion of the "earned income credit." "Income tax" reflects the amount reported on the tax return and is, therefore, before any examination or enforcement activities by the Internal Revenue Service. It represents the tax filer reported income tax liability that was payable to the U.S. Department of the Treasury.

[2] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. government employees.

Income tax includes the "alternative minimum tax" and is after subtraction of all tax credits except a portion of the "earned income credit." AGI amount is less deficits, where applicable.

This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 2011, including any returns filed for tax years preceding 2010.

In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the income tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics in this table should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes.

Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer or accountant or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.

For explanation of the tax law changes which could affect the year-to-year analysis of data, refer to the respective years' "Individual Income Tax Returns, Preliminary Data" article published in the SOI Spring Bulletin. For further explanation of the tax terms, refer to the "Individual Income Tax Returns," Publication 1304.

Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer or accountant or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.

For explanation of the tax law changes which could affect the year-to-year analysis of data, refer to the respective years' "Individual Income Tax Returns, Preliminary Data" article published in the SOI Spring Bulletin. For further explanation of the tax terms, refer to the "Individual Income Tax Returns," Publication 1304.

[1] "Income tax" includes the "alternative minimum tax," and is after subtraction of all tax credits except a portion of the "earned income credit." "Income tax" reflects the amount reported on the tax return and is, therefore, before any examination or enforcement activities by the Internal Revenue Service. It represents the tax filer reported income tax liability that was payable to the U.S. Department of the Treasury.

[2] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. government employees.

Income tax includes the "alternative minimum tax" and is after subtraction of all tax credits except a portion of the "earned income credit." AGI amount is less deficits, where applicable.

This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 2011, including any returns filed for tax years preceding 2010.

In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the income tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics in this table should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes.

Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer or accountant or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.

For explanation of the tax law changes which could affect the year-to-year analysis of data, refer to the respective years' "Individual Income Tax Returns, Preliminary Data" article published in the SOI Spring Bulletin. For further explanation of the tax terms, refer to the "Individual Income Tax Returns," Publication 1304.

[1] "Income tax" includes the "alternative minimum tax," and is after subtraction of all tax credits except a portion of the "earned income credit." "Income tax" reflects the amount reported on the tax return and is, therefore, before any examination or enforcement activities by the Internal Revenue Service. It represents the tax filer reported income tax liability that was payable to the U.S. Department of the Treasury.

[2] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. government employees.

Income tax includes the "alternative minimum tax" and is after subtraction of all tax credits except a portion of the "earned income credit." AGI amount is less deficits, where applicable.

This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 2011, including any returns filed for tax years preceding 2010.

In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the income tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics in this table should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes.

Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer or accountant or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.

For explanation of the tax law changes which could affect the year-to-year analysis of data, refer to the respective years' "Individual Income Tax Returns, Preliminary Data" article published in the SOI Spring Bulletin. For further explanation of the tax terms, refer to the "Individual Income Tax Returns," Publication 1304.

[1] "Income tax" includes the "alternative minimum tax," and is after subtraction of all tax credits except a portion of the "earned income credit." "Income tax" reflects the amount reported on the tax return and is, therefore, before any examination or enforcement activities by the Internal Revenue Service. It represents the tax filer reported income tax liability that was payable to the U.S. Department of the Treasury. [2] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. government employees.

NOTES:

Income tax includes the "alternative minimum tax" and is after subtraction of all tax credits except a portion of the "earned income credit." AGI amount is less deficits, where applicable.

This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 2011, including any returns filed for tax years preceding 2010.

In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the income tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics in this table should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes.

Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer or accountant or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.

For explanation of the tax law changes which could affect the year-to-year analysis of data, refer to the respective years' "Individual Income Tax Returns, Preliminary Data" article published in the SOI Spring Bulletin. For further explanation of the tax terms, refer to the "Individual Income Tax Returns," Publication 1304.

[1] "Income tax" includes the "alternative minimum tax (AMT)" and is reported after the subtraction of all tax credits except the earned income credit. "Income tax" reflects the amount reported on the tax return and is, therefore, before any examination or enforcement activities by the Internal Revenue Service. Income tax represents the tax filer reported income tax liability that was payable to the U.S. Department of the Treasury and excludes the effects of the earned income credit and any items in the payments section of form 1040 on final taxes owed.

[2] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. government employees.

NOTES: AGI amount is less deficits, where applicable.

This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 2010, including any returns filed for tax years preceding 2009.

In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the total tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics in this table should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes.

Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer, or accountant, or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.

For explanation of the tax law changes which could affect the year-to-year analysis of data, refer to the respective years' "Individual Income Tax Returns, Preliminary Data" article published in the SOI Spring Bulletin. For further explanation of the tax terms, refer to the respective years' "Individual Income Tax Returns," Publication 1304.

Note: Detail may not add to totals because of rounding.

[1] "Income tax" includes the "alternative minimum tax (AMT)" and is after the subtraction of all tax credits except the earned income credit. "Income tax" reflects the amount reported on the tax return and is, therefore, before any examination or enforcement activities by the Internal Revenue Service. It represents the tax filer reported income tax liability that was payable to the U.S. Department of the Treasury.

[2] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. government employees.

NOTES:

AGI amount is less deficits, where applicable.

This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 2009, including any returns filed for tax years preceding 2008.

In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the total tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics in this table should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes.

Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer, or accountant, or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.

For explanation of the tax law changes which could affect the year-to-year analysis of data, refer to the respective years' "Individual Income Tax Returns, Preliminary Data" article published in the SOI Spring Bulletin. For further explanation of the tax terms, refer to the respective years' "Individual Income Tax Returns," Publication 1304.

Note: Detail may not add to totals because of rounding.

<sup>\* -</sup> Data for Tax Year 2007 includes returns that were filed by individuals only to receive the economic stimulus payment and who had no other reason to file. This may affect the data for various items shown in the table such as the total number of returns filed and adjusted gross income.

Income tax includes the "alternative minimum tax" and is after subtraction of all tax credits except a portion of the "earned income credit." AGI amount is less deficits, where applicable.

This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 2008, including any returns filed for tax years preceding 2007.

In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the income tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics in this table should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes.

Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer or accountant or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.

For explanation of the tax law changes which could affect the year-to-year analysis of data, refer to the respective years' "Individual Income Tax Returns, Preliminary Data" article published in the SOI Spring Bulletin. For further explanation of the tax terms, refer to the "Individual Income Tax Returns," Publication 1304.

<sup>[1] &</sup>quot;Income tax" includes the "alternative minimum tax," and is after subtraction of all tax credits except a portion of the "earned income credit." "Income tax" reflects the amount reported on the tax return and is, therefore, before any examination or enforcement activities by the Internal Revenue Service. It represents the tax filer reported income tax liability that was payable to the U.S. Department of the Treasury. [2] Includes, for example, returns filed from Army Post Office and Fleet Post Office addresses by members of the armed forces stationed overseas; returns filed by other U.S. citizens abroad; and returns filed by residents of Puerto Rico with income from sources outside Puerto Rico or with income earned as U.S. government employees. Income tax includes the "alternative minimum tax" and is after subtraction of all tax credits except a portion of the "earned income credit."

AGI Amount is less deficits, where applicable.

This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 2006, including any returns filed for tax years preceding 2005.

In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the income tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes.

Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address

of a tax lawyer or accountant or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.

Income tax includes the "alternative minimum tax."

AGI Amount is less deficits, where applicable.

This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 2003, including any returns filed for tax years preceding 2003. In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the income tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes.

Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer or accountant or the address of a place of business; moreover, such addresses could each have been located in a

State other than the State in which the taxpayer resided.

Details may not add to totals because of rounding.

This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 2002. In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the income tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics in this table should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes.

Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer or accountant or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.

This table includes (a) "substitutes for returns," whereby the Internal Revenue Service constructs returns for certain non-filers on the basis of available information and imposes an income tax on the resulting estimate of the tax base, i.e., "taxable income," and (b) returns of nonresident or departing aliens.

Itemized deductions include any amounts reported by the taxpayer, even if they could not be used in computing "taxable income," the base on which the regular income tax was computed. Thus, total itemized deductions include amounts that did not have to be reported by taxpayers with no "adjusted gross income." (Adjusted gross income is the total from which these deductions would normally be subtracted.) In addition, if standard and itemized deductions were both reported on a tax return, the form of deduction actually used in computing income tax was the one used for the statistics. Therefore, if the standard deduction was the form of deduction used, the total reported for itemized deductions was excluded from the statistics. However, the component deductions were not similarly excluded. As a result, the number of returns and related amounts for the component deductions are slightly overstated in relation to the grand total shown for itemized deductions. These components are also overstated in relation to the total because there was a statutory limitation on the total of itemized deductions that could be claimed by certain high-income taxpayers. This limitation did not affect the component deductions, the sum of which therefore exceeded the total used in computing income tax.

Income tax includes the "alternative minimum tax."  $% \left( \frac{1}{2}\right) =\left( \frac{1}{2}\right) \left( \frac{1}{2}\right) \left$ 

AGI Amount is less deficits, where applicable.

Tax-exempt Interest is not included in AGI.

Details may not add to totals because of rounding.

This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 2000. In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the income tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics in this table should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes.

Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer or accountant or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.

This table includes (a) "substitutes for returns," whereby the Internal Revenue Service constructs returns for certain non-filers on the basis of available information and imposes an income tax on the resulting estimate of the tax base, i.e., "taxable income," and (b) returns of nonresident or departing aliens.

Itemized deductions include any amounts reported by the taxpayer, even if they could not be used in computing "taxable income," the base on which the regular income tax was computed. Thus, total itemized deductions include amounts that did not have to be reported by taxpayers with no "adjusted gross income." (Adjusted gross income is the total from which these deductions would normally be subtracted.) In addition, if standard and itemized deductions were both reported on a tax return, the form of deduction actually used in computing income tax was the one used for the statistics. Therefore, if the standard deduction was the form of deduction used, the total reported for itemized deductions was excluded from the statistics. However, the component deductions were not similarly excluded. As a result, the number of returns and related amounts for the component deductions are slightly overstated in relation to the grand total shown for itemized deductions. These components are also overstated in relation to the total because there was a statutory limitation on the total of itemized deductions that could be claimed by certain high-income taxpayers. This limitation did not affect the component deductions, the sum of which therefore exceeded the total used in computing income tax.

Income tax includes the "alternative minimum tax."

AGI Amount is less deficits, where applicable.

Tax-exempt Interest is not included in AGI.

Special Note: These data do not include Tax Year 2000 returns that were filed after December 31, 2001, for those taxpayers who were granted an additional extention of time to file because of the events of September 11, 2001.

Details may not add to totals because of rounding.

This table presents aggregates of all returns filed and processed through the Individual Master File (IMF) system during Calendar Year 1997. In general, during administrative or Master File processing, taxpayer reporting discrepancies are corrected only to the extent necessary to verify the income tax liability reported. Most of the other corrections to the taxpayer records used for these statistics could not be made because of time and resource constraints. The statistics in this table should, therefore, be used with the knowledge that some of the data have not been perfected or edited for statistical purposes.

Classification by State was usually based on the taxpayer's home address. However, some taxpayers may have used the address of a tax lawyer or accountant or the address of a place of business; moreover, such addresses could each have been located in a State other than the State in which the taxpayer resided.

This table includes (a) "substitutes for returns," whereby the Internal Revenue Service constructs returns for certain non-filers on the basis of available information and imposes an income tax on the resulting estimate of the tax base, i.e., "taxable income," and (b) returns of nonresident or departing aliens.

Itemized deductions include any amounts reported by the taxpayer, even if they could not be used in computing "taxable income," the base on which the regular income tax was computed. Thus, total itemized deductions include amounts that did not have to be reported by taxpayers with no "adjusted gross income." (Adjusted gross income is the total from which these deductions would normally be subtracted.) In addition, if standard and itemized deductions were both reported on a tax return, the form of deduction actually used in computing income tax was the one used for the statistics. Therefore, if the standard deduction was the form of deduction used, the total reported for itemized deductions was excluded from the statistics. However, the component deductions were not similarly excluded. As a result, the number of returns and related amounts for the component deductions are slightly overstated in relation to the grand total shown for itemized deductions. These components are also overstated in relation to the total because there was a statutory limitation on the total of itemized deductions that could be claimed by certain high-income taxpayers. This limitation did not affect the component deductions, the sum of which therefore exceeded the total used in computing income tax.

Income tax includes the "alternative minimum tax."

AGI Amount is less deficits, where applicable.

Tax-exempt Interest is not included in AGI.
