---

[1] Effective tax rate defined as tax after credits as a proportion of adjusted gross income by AGI level and all higher AGI levels.

[2] Prior to the Tax Reform Act of 1986, various portions of capital gains were excluded from the computation of AGI, such that only some gains were taxed along with ordinary income. Later, all gains were included in AGI but taxed at a preferential rate. For more information, please see Gregg A. Esenwein, 2007, "Individual Capital Gains Income: Legislative History." Washington, DC: Congressional Research Service.

Note: Detail may not add to totals because of rounding. Totals include dependent returns.

[1] Effective tax rate defined as tax after credits as a proportion of adjusted gross income by AGI level and all higher AGI levels.

[2] Prior to the Tax Reform Act of 1986, various portions of capital gains were excluded from the computation of AGI, such that only some gains were taxed along with ordinary income. Later, all gains were included in AGI but taxed at a preferential rate. For more information, please see Gregg A. Eesenwein, 2007, "Individual Capital Gains Income: Legislative History." Washington, DC: Congressional Research Service.

In 1975, capital gains distributions reported on Form 1040 and net capital gain less net capital loss are first subtracted from AGI, and total capital gains are recalculated by summing short term and long term gains and losses and two times the gains reported on form 1040 less loss carryovers, then added back to AGI.

Note: Detail may not add to totals because of rounding. Totals include dependent returns.
