\* Non-zero value rounded to zero; \*\* Insufficient data

(1) Calendar year. Baseline is current law for 2020 as of July 19, 2021. Individual income tax on long-term capital gains and qualified dividends is calculated by comparing liability under current law to liability when qualified dividends and net long term gains in excess of net short-term losses are excluded from income and excluded from the base of the 3.8 percent net investment surtax enacted by the Affordable Care Act (ACA). For a description of TPC's current law and current policy baselines, see

<http://www.taxpolicycenter.org/taxtopics/Baseline-Definitions.cfm>

(2) Includes both filing and non-filing units but excludes those that are dependents of other tax units. Tax units with negative adjusted gross income are excluded from their respective income class but are included in the totals. For a description of expanded cash income, see

<http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) The income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units. The breaks are (in 2020 dollars): 20% \$26,100; 40% \$52,000; 60% \$94,800; 80% \$181,200; 90% \$257,700; 95% \$381,200; 99% \$872,900; 99.9% \$3,582,700.

(4) Tax units reporting long-term positive gains and qualified dividends.

(5) Average individual income tax on long-term positive capital gains and qualified dividends as a percentage of gains and qualified dividends.

(6) Average individual income tax as a percentage of nongain taxable income.
