Number of AMT Taxpayers (millions). Baseline: 0.2
Proposal: 0.2

* Non-zero value rounded to zero; ** Insufficient data
(1) Calendar Year. Baseline is the law currently in place as of November 10, 2021. The provision would, in general, subject a high-income individual to net investment income tax of 3.8 percent on net income or net gain regardless of whether the taxpayer materially participates in a trade or business that generated the net income or net gain, where such net income or net gain would not otherwise be subject to FICA or SECA tax. The high income threshold amount would be $\$ 500,000$ in the case of a married couple filing a joint return or surviving spouse, $\$ 250,000$ in the case of a married individual filing a separate return, and $\$ 400,000$ in any other case.
http://www.taxpolicycenter.org/taxtopics/Baseline-Definitions.cfm
(2) Includes both filing and non-filing units but excludes those that are dependents of other tax units. Tax units with negative adjusted gross income are excluded from their respective income class but are included in the totals. For a description of expanded cash income, see
http://www.taxpolicycenter.org/TaxModel/income.cfm
(3) The income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units. The breaks are (in 2020 dollars): $20 \%$ \$27,300; $40 \%$ \$54,300; $60 \%$ \$97,500; $80 \%$ \$177,600; $90 \%$ \$259,400; 95\% \$372,100; 99\% \$885,200; 99.9\% \$4,028,500.
(4) Includes tax units with a change in federal tax burden of $\$ 10$ or more in absolute value.
(5) After-tax income is expanded cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); estate tax; and excise taxes.
(6) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, the estate tax, and excise taxes) as a percentage of average expanded cash income.

The incomes used are adjusted for family size }}$ by dividing by the square root of the number of people in the tax unit. The resulting percentile breaks are (in 2020 dollars): $20 \%$ \$19,000; 40\% $\$ 37,400 ; 60 \% \$ 65,000 ; 80 \% ~ \$ 109,300 ; 90 \% ~ \$ 158,700 ; 95 \% \$ 223,000$; $99 \%$ \$14,600; 99.9\% \$2,287,400.
(4) Includes tax units with a change in federal tax burden of $\$ 10$ or more in absolute value.
(5) After-tax income is expanded cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); estate tax; and excise taxes.
(6) For income categories for which the baseline tax burden is negative, a positive percent change in average federal tax indicates a net increase in federal subsidies, and a negative percent change indicates a net decrease in federal subsidies.
(7) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, the estate tax, and excise taxes) as a percentage of average expanded cash income.
