* Less than 0.05 percent. ** Less than \$1 in absolute value.

(1) Calendar year. Baseline is current law. Includes the following provisions: reduce the tax rate on dividends and long-term capital gains to 15 percent (the rate for individuals in the 10 and 15-percent tax brackets would be 5 percent; preferential rates would not apply to income that, under current law, is reported as dividends on tax returns but represents distributions of interest income from mutual funds).

(2) Tax units with negative AGI are excluded from the lowest quintile but are included in the totals. Includes both filing and non-filing units. Tax units that are dependents of other taxpayers are excluded from the analysis.

(3) After-tax income is AGI less individual income tax net of refundable credits.

(4) Average income tax, net of refundable credits, as a percentage of average AGI.
