Source: Urban-Brookings Tax Policy Center Microsimulation Model (version 1006-1).

(1) Calendar year. Baseline is current law. Proposal includes: taxation of employer sponsored health insurance premiums, a standard deduction for health insurance of \$7,500 for individual coverage and \$15,000 for family coverage applied to both the income tax base and payroll tax base, a reduction in the EITC phase-out rates for filers with children to 15 percent, repeal of the self-employed health insurance deduction, and limitation of eligibility for the itemized deduction for medical expenses to Medicare beneficiaries. Medicare beneficiaries and dependents are not eligible for the standard deduction for health insurance. Minimum premiums for eligibility are \$500 for individual coverage and \$1,000 for family coverage. All nominal values are presented in 2009 dollars and indexed to the CPL. Following convention, the estimates are static and do not incorporate behavioral responses. In particular, they do not account for the gains of those who newly obtain health insurance, the losses of those who lose coverage due to the proposal, or the potential reductions in both premiums and comprehensiveness of health insurance.

(2) Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see <http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) Includes both filing and non-filing units. Tax units that are dependents of other taxpayers are excluded from the analysis.

(4) After-tax income is modified cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax. Modified cash income includes the pre-tax portion of employer-sponsored health insurance and the employer's share of payroll taxes on the insurance.

(5) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average modified cash income (defined above).
