Source: Urban-Brookings Tax Policy Center Microsimulation Model (version 1006-2).
Number of AMT Taxpayers (millions). Baseline:
4.1 Proposal:
4.1
(1) Calendar year. Baseline is 2008 current law assuming extension and indexation for inflation of the 2007 AMT patch. The proposal provides a refundable basic credit of $\$ 500$ ( $\$ 1,000$ for married couples filing a joint return) available to all tax filers with at least $\$ 3000$ of earned income and Social Security benefits or at least $\$ 1$ of income tax liability after nonrefundable credits excluding the child credit. For any tax unit with at least $\$ 1$ of basic credit, the proposal provides an additional, refundable, $\$ 300$ credit for each child-tax-credit-eligible child. The combined credit phases out at a 5 percent rate above $\$ 150,000$ of AGI ( $\$ 300,000$ for married couples filing jointly). Our estimates are based on 2008 incomes; the proposal actually allows the rebate to be based on 2007 income if it results in a higher amount. Our estimates assume that all potential beneficiaries claim the credit.
(2) Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see http://www.taxpolicycenter.org/TaxModel/income.cfm
(3) The cash income percentile breaks used in this table are (in 2006 dollars): $20 \%$ \$14,385, $40 \% \$ 27,645,60 \% \$ 48,311,80 \% \$ 85,905,90 \% \$ 126,802,95 \%$ \$179,038, $99 \%$ \$437,351, $99.5 \%$ \$683,621, and 99.9\% 2,001,713.
(4) Includes both filing and non-filing units but excludes those that are dependents of other tax units
(5) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.
(6) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.
