Source: Urban-Brookings Tax Policy Center Microsimulation Model (version 0309-1).
Note: Includes all tax units reporting a net gain or loss on Schedules C, E, or F.
( Calendar year. Baseline is the Administration's baseline (extends all of the individual income tax provisions included in 2001 EGTRRA and 2003 JGTRRA; maintains the estate tax at its 2009 parameters; extends the 2009 MIT Patch and indexes the AMT exemption, rate bracket threshold, and phase-out exemption threshold for inflation). The baseline reinstates the top two individual income tax rates and limits the tax rate at which itemized deductions reduce tax liability to 28 percent. The proposal imposes a 20 percent rate on capital gains and qualified dividends for tax units with AGI above $\$ 200,000$ ( $\$ 250,000$ for couples).
(2) Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see
http://www.taxpolicycenter.org/TaxModel/income.cfm
(3) The cash income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units. The incomes used are adjusted for family size by dividing by the square root of the number of people in the tax unit. The resulting percentile breaks are (in 2009 dollars): $20 \% \$ 13,636,40 \% ~ \$ 25,075,60 \% \$ 42,597,80 \% ~ \$ 68,949,90 \% \$ 98,059,95 \% \$ 138,184,99 \% ~ \$ 356,154,999 \%$ 1,639,811
) Includes both filing and non-filing units but excludes those that are dependents of other tax units
(
(6) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.
