Source: Urban-Brookings Tax Policy Center Microsimulation Model (version 0509-7).

Number of AMT Taxpayers (millions). Baseline: 6.1

Proposal: 6.8

Note: Estimates assume that individuals pay down their mortgage in response to a smaller tax benefit for mortgage interest.

(1) Calendar year. Baseline is current policy. Proposal: replaces the mortgage interest deduction with a 20 percent non-refundable credit; and limits mortgages eligible for the credit to \$500,000 on primary residences only. We approximate the \$500,000 limit on mortgages with a limit on mortgage interest eligible for the credit of \$25,000. The 20 percent credit is designed to raise \$30 billion relative to current law.

(2) Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see <http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) Includes both filing and non-filing units but excludes those that are dependents of other tax units.

(4) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.

(5) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.

Note: Estimates assume that individuals pay down their mortgage in response to a smaller tax benefit for mortgage interest.

(1) Calendar year. Baseline is current policy. Proposal: replaces the mortgage interest deduction with a 20 percent non-refundable credit; and limits mortgages eligible for the credit to \$500,000 on primary residences only. We approximate the \$500,000 limit on mortgages with a limit on mortgage interest eligible for the credit of \$25,000. The 20 percent credit is designed to raise \$30 billion relative to current law.

(2) Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see

<http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) Includes both filing and non-filing units but excludes those that are dependents of other tax units.

(4) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.

(5) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.
