Proposal: 22.7

* Less than 0.05
** Insufficient data
(1) Calendar year. Baseline is current law. Proposal is the 28 percent limitation in President Obama's American Jobs Act of 2011 which would limit the value of all itemized deductions and certain other tax expenditures for high-income taxpayers by limiting the tax value of otherwise allowable deductions and exclusions to 28 percent. Estimates assume that taxpayers would adjust their investment portfolio and optimally pay down their mortgage balance if their tax benefit from mortgage interest were reduced. For a description of TPC's current law and current policy baselines, see
http://www.taxpolicycenter.org/T11-0270
(2) Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see
http://www.taxpolicycenter.org/TaxModel/income.cfm
(3) The cash income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units

The breaks are (in 2011 dollars): $20 \%$ \$17,909; 40\% \$37,090; $60 \%$ \$64,531; $80 \%$ \$111,344; $90 \%$ \$160,377; $95 \%$ \$227,314; 99\% \$592,985; $99.9 \% \$ 2,682,143$.
(4) Includes both filing and non-filing units but excludes those that are dependents of other tax units.
(5) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.
(6) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash

(1) Calendar year. Baseline is current law. Proposal is the 28 percent limitation in President Obama's American Jobs Act of 2011 which would limit the value of all itemized deductions and certain other tax expenditures for high-income taxpayers by limiting the tax value of otherwise allowable deductions and exclusions to 28 percent. Estimates assume that taxpayers would adjust their investment portfolio and optimally pay down for high-income taxpayers by limiting the tax value of otherwise allowable deductions and exclusions to 28 percent. Estimates assume that taxpayers wo
their mortgage balance if their tax benefit from mortgage interest were reduced. For a description of TPC's current law and current policy baselines, see
http://www.taxpolicycenter.org/T11-0270
(2) Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see
(3) The cash income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units. The incomes used are adjusted for family size by dividing by the square root of the number of people in the tax unit. The resulting percentile breaks are (in 2011 dollars): $20 \% \$ 12,690 ; 40 \% ~ \$ 24,714 ; 60 \% ~ \$ 41,203 ; 80 \% \$ 67,700 ; 90 \% \$ 97,816 ; 95 \%$ \$138,772; $99 \%$ \$358,601; 99.9\% \$1,621,178.
(4) Includes both filing and non-filing units but excludes those that are dependents of other tax units.
(5) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax
(6) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.

Less than 0.05

1) Calendar year. Baseline is current law. Proposal is the 28 percent limitation in President Obama's American Jobs Act of 2011 which would limit the value of all itemized deductions and certain other tax expenditures for high-income taxpayers by limiting the tax value of otherwise allowable deductions and exclusions to 28 percent. Estimates assume that taxpayers would adjust their investment portfolio and optimally
(2) Taxunits with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see
http://www.taxpolicycenter.org/TaxModel/income.cfm
(3) The cash income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units. The incomes used are adjusted for family size by dividing by the square root of the number of people in the tax unit. The resulting percentile breaks are (in 2011 dollars): $20 \% \$ 12,690 ; 40 \% ~ \$ 24,714 ; 60 \% \$ 41,203 ; 80 \% ~ \$ 67,700 ; 90 \% \$ 97,816 ; 95 \% \$ 138,772$ $99 \%$ \$358,601; 99.9\% \$1,621,178.
(4) Includes both filing and non-filing units but excludes those that are dependents of other tax units.
2) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.
(6) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.

* Less than 0.05

Note: Elderly tax units are those with either head or spouse (if filing jointly) age 65 or older
(1) Calendar year. Baseline is current law. Proposal is the 28 percent limitation in President Obama's American Jobs Act of 2011 which would limit the value of all itemized deductions and certain other tax expenditures for high-income taxpayers by limiting the tax value of otherwise allowable deductions and exclusions to 28 percent. Estimates assume that taxpayers would adjust their investment portfolio and optimally pay down their mortgage balance if their tax benefit from mortgage interest were reduced. For a description of TPC's current law and current policy baselines, see
http://www.taxpolicycenter.org/T11-0270
(2) Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see
(3) The cash income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units. The incomes used are adjusted for family size by dividing by the square root of the number of people in the tax unit. The resulting percentile breaks are (in 2011 dollars): $20 \% \$ 12,690 ; 40 \% ~ \$ 24,714 ; 60 \% ~ \$ 41,203 ; 80 \% \$ 67,700 ; 90 \% \$ 97,816 ; 95 \%$ \$138,772; $99 \%$ \$358,601; 99.9\% \$1,621,178.
(4) Includes both filing and non-filing units but excludes those that are dependents of other tax units.
(5) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax
(6) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.
