Number of AMT Taxpayers (millions). Baseline: 27.0

Proposal: 27.7

* Less than 0.05

** Insufficient data

(1) Calendar year. Baseline is current law. Proposal would reduce mortgage interest deduction to 15 percent over ten years and then completely replace this deduction with a 15% non-refundable credit for mortgage interest. Deduction would be limited to 27 percent for 2015. The option of the credit would immediately available. Both the credit and the deduction will be limited to the first \$500,000 of a mortgage on primary residence only. Estimates assume that taxpayers would adjust their investment portfolios and optimally pay down their mortgage balance if their tax benefit from mortgage interest were reduced.

(2) Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see

<http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) The cash income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units. The breaks are (in 2011 dollars): 20% \$19,452; 40% \$40,088; 60% \$69,465; 80% \$120,224; 90% \$170,951; 95% \$243,973; 99% \$633,380; 99.9% \$2,884,799.

(4) Includes both filing and non-filing units but excludes those that are dependents of other tax units.

(5) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.

(6) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.

(1) Calendar year. Baseline is current law. Proposal would reduce mortgage interest deduction to 15 percent over ten years and then completely replace this deduction with a 15% non-refundable credit for mortgage interest. Deduction would be limited to 27 percent for 2015. The option of the credit would immediately be available. Both the credit and the deduction will be limited to the first \$500,000 of a mortgage on primary residence only. Estimates assume that taxpayers would adjust their investment portfolios and optimally pay down their mortgage balance if their tax benefit from mortgage interest were reduced.

(2) Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see

<http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) The cash income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units. The incomes used are adjusted for family size by dividing by the square root of the number of people in the tax unit. The resulting percentile breaks are (in 2011 dollars): 20% \$13,764; 40% \$26,717; 60% \$44,414; 80% \$72,834; 90% \$104,772; 95% \$148,814; 99% \$386,554; 99.9% \$1,774,285.

(4) Includes both filing and non-filing units but excludes those that are dependents of other tax units.

(5) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.

(6) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.
