Source: Urban-Brookings Tax Policy Center Microsimulation Model (version 0412-7).

Number of AMT Taxpayers (millions). Baseline: 4.0

Proposal: 33.5

(1) Calendar year. Baseline is current policy with AMT exemption amounts of \$79,850 for married couples filing a joint return, \$51,150 for others (\$39,925 for married individuals filing separate returns). Proposal would: a) return AMT exemption amounts to \$45,000 for married couples filing a joint return, \$33,750 for others (\$22,500 for married individuals filing a separate return) and disallow certain credits against the AMT; b) reinstate pre-EGTRRA estate tax law including an effective exemption of \$1 million and a top statutory estate tax rate of 55 percent, c) extend a portion of the 33 percent bracket; d) raise the 33 percent rate to 36 percent beginning at a threshold of \$200,000 (single), \$250,000 (married), or \$225,000 (head of household), indexed for inflation after 2009, less the standard deduction and one personal exemption (two if married); e) raise the top tax rate to 39.6 percent; f) reinstate PEP and Pease at thresholds of \$250,000 of AGI (married) and \$200,000 (single), indexed for inflation after 2009; and g) tax capital gains and qualified dividends at 20% for taxpayers in the top two brackets. For a description of TPC's current law and current policy baselines, see http://www.taxpolicycenter.org/T11-0270

(2) Includes both filing and non-filing units but excludes those that are dependents of other tax units. Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see http://www.taxpolicycenter.org/TaxModel/income.cfm

(3) The income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units. The breaks are (in 2012 dollars): 20% \$20.113: 40% \$39.790: 60% \$64.484: 80% \$108.266: 90% \$143.373: 95% \$204.296: 99% \$506.210: 99.9% \$2.655.675.

- (5) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.
- (6) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.

^{*} Less than 0.05

^{**} Insufficient data

⁽⁴⁾ Includes tax units with a change in federal tax burden of \$10 or more in absolute value.

Source: Urban-Brookings Tax Policy Center Microsimulation Model (version 0412-7).

(1) Calendar year. Baseline is current policy with AMT exemption amounts of \$79,850 for married couples filing a joint return, \$51,150 for others (\$39,925 for married individuals filing separate returns). Proposal would: a) return AMT exemption amounts to \$45,000 for married couples filing a joint return, \$33,750 for others (\$22,500 for married individuals filing a separate return) and disallow certain credits against the AMT; b) reinstate pre-EGTRRA estate tax law including an effective exemption of \$1 million and a top statutory estate tax rate of \$5 percent, c) extend a portion of the 33 percent breached; d) raise the 33 percent rate to 36 percent beginning at a threshold of \$200,000 (single), \$250,000 (married), or \$225,000 (head of household), indexed for inflation after 2009, less the standard deduction and one personal exemption (two if married); e) raise the top tax rate to 39.6 percent; f) reinstate PEP and Pease at thresholds of \$250,000 of AGI (married) and \$200,000 (single), indexed for inflation after 2009; and g) tax capital gains and qualified dividends at 20% for taxpayers in the top two brackets. For a description of TPC's current law and current policy baselines, see

http://www.taxpolicycenter.org/T11-0270

(2) Includes both filling and non-filling units but excludes those that are dependents of other tax units. Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see

http://www.taxpolicycenter.org/TaxModel/income.cfm

(3) The income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units. The incomes used are adjusted for family size by dividing by the square root of the number of people in the tax unit. The resulting percentile breaks are (in 2012 dollars): 20% \$13,941; 40% \$26,136; 60% \$41,226; 80% \$64,003; 90% \$88,398; 95% \$122,605; 99% \$295,996; 99.9% \$1,565,087.

- (4) Includes tax units with a change in federal tax burden of \$10 or more in absolute value.
- (5) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.
- (6) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.

Source: Urban-Brookings Tax Policy Center Microsimulation Model (version 0412-7).

Note: Tax units with children are those claiming an exemption for children at home or away from home.

(1) Calendar year. Baseline is current policy with AMT exemption amounts of \$79,850 for married couples filing a joint return, \$51,150 for others (\$39,925 for married individuals filing separate return) and disallow certain credits against the AMT; b) reinstate pre-EGTRRA estate tax law including an effective exemption of \$1 million and a top statutory estate tax rate of \$5 percent, c) extend a portion of the 33 percent bracket; d) raise the 33 percent trate to 36 percent beginning at a threshold of \$200,000 (single), \$250,000 (married), or \$225,000 (two inflation after 2009, less the standard deduction and one personal exemption (two if married); e) raise the top tax rate to 39.6 percent; f) reinstate PEP and Pease at thresholds of \$250,000 of AGI (married) and \$200,000 (single), indexed for inflation after 2009; and g) tax capital gains and qualified dividends at 20% for taxpayers in the top two brackets. For a description of TPC's current law and current policy baselines, see http://www.taxpolicycenter.org/Ti1-0270

(2) Includes both filing and non-filing units but excludes those that are dependents of other tax units. Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see

http://www.taxpolicycenter.org/TaxModel/income.cfm

(3) The income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units. The incomes used are adjusted for family size by dividing by the square root of the number of people in the tax unit. The resulting percentile breaks are (in 2012 dollars): 20% \$13,941; 40% \$26,136; 60% \$41,226; 80% \$64,003; 90% \$88,398; 95% \$122,605; 99% \$2,506,5087.

(4) Includes tax units with a change in federal tax burden of \$10 or more in absolute value.

(5) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.
