(1) Calendar year. Effective marginal tax rates are weighted by the appropriate income source. Baseline is current policy, proposal would raise the top regular individual income tax rate by one percentage point to 36 percent for tax units whose taxable income is above \$1 million less the standard deduction and two personal exemptions for married couples, \$800,000 (\$900,000) less the standard deduction and one exemption for singles (heads of household). Those values are expressed in 2009 dollars and result in actual thresholds of \$851,550 for single taxpayers, \$1,064,450 for married taxpayers filing jointly, \$958,000 for heads of household, and \$532,200 for married taxpayers filing separately. For a description of TPC's current law and current policy baselines, see:

<http://taxpolicycenter.org/numbers/displayatab.cfm?Docid=3131>

(2) Includes both filing and non-filing units but excludes those that are dependents of other tax units. Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see

<http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) Adjusted gross income (AGI) values shown are for married couples filing a joint return (MFJ); the thresholds for single tax units are 80 percent of the MFJ amounts and the thresholds for heads of household are 90 percent of the MFJ amounts. The AGI thresholds are expressed in 2009 dollars.
