(1) Calendar year. Effective marginal tax rates are weighted by the appropriate income source. Baseline is current policy. Proposal would limit the tax benefit of all itemized deductions to 28 percent and apply a similar limitation to the alternative minimum tax. Estimates assume that taxpayers would adjust their investment portfolio and pay down their mortgage balance if their tax benefit from mortgage interest was reduced. For a description of TPC's current policy baseline, see:

<http://taxpolicycenter.org/numbers/displayatab.cfm?Docid=3131>

(2) Includes both filing and non-filing units but excludes those that are dependents of other tax units. Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see

<http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) The income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units. The breaks are (in 2012 dollars): 20% \$20,113; 40% \$39,790; 60% \$64,484; 80% \$108,266; 90% \$143,373; 95% \$204,296; 99% \$506,210; 99.9% \$2,655,675.
