Source: Urban-Brookings Tax Policy Center Microsimulation Model (version 0412-8).

(1) Calendar year. Effective marginal tax rates are weighted by the appropriate income source. Baseline is current policy. Proposal would limit the tax benefit of all itemized deductions except charitable contributions, tax-exempt health insurance premiums, and tax-exempt bond interest to 28 percent and apply a similar limitation to the alternative minimum tax. Estimates assume that taxpayers would adjust their investment portfolio and pay down their mortgage balance if their tax benefit from mortgage interest was reduced. For a description of TPC's current law and current policy baselines, see

<http://taxpolicycenter.org/numbers/displayatab.cfm?Docid=3131>

(2) Includes both filing and non-filing units but excludes those that are dependents of other tax units. Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see

<http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) Adjusted gross income (AGI) values shown are for married couples filing a joint return (MFJ); the thresholds for single tax units are 80 percent of the MFJ amounts and the thresholds for heads of household are 90 percent of the MFJ amounts. The AGI thresholds are expressed in 2009 dollars.
