Source: Urban-Brookings Tax Policy Center Microsimulation Model (version 0412-8).
(1) Calendar year. Effective marginal tax rates are weighted by the appropriate income source. Baseline is current policy. Proposal provides an across-the-board reduction of 20 percent in the allowable amount of all itemized deductions; it would include 20 percent of employer-sponsored health insurance premiums and 20 percent of municipal bond interest in gross income. For a description of TPC's current law and current policy baselines, see
http://taxpolicycenter.org/numbers/displayatab.cfm?Docid=3131
(2) Includes both filing and non-filing units but excludes those that are dependents of other tax units. Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see
http://www.taxpolicycenter.org/TaxModel/income.cfm
(3) The income percentile classes used in this table are based on the income distribution for the entire population and contain an equal number of people, not tax units. The breaks are (in 2012 dollars): $20 \%$ \$20,113; $40 \%$ \$39,790; $60 \%$ \$64,484; $80 \%$ \$108,266; $90 \%$ \$143,373; $95 \%$ \$204,296; $99 \%$ \$506,210; $99.9 \% \$ 2,655,675$.
