Number of AMT Taxpayers (millions). Baseline: 4.0

Proposal: 4.1

\* Less than 0.05

\*\* Insufficient data

(1) Calendar year. Baseline is current policy. Proposal would revert the Child Tax Credit, Earned Income Tax Credit, and Child and Dependent Care Tax Credit to pre-EGTRRA tax law. For the CTC, the proposal would not allow the credit against the AMT, decrease the per child amount to \$500, and only allow refundability under the Full Refundability for Excess Dependents provision. For the EITC, the proposal would limit the credit by AMT liability, calculate EITC using a modified form of AGI, remove the addition to the plateau for married couples filing jointly, and not allow special rules for tax units with three or more children. For the CDCTC, the per child amount would decrease to \$2,400, the maximum credit rate would decrease to 30 percent, and the phase down structure would change. For a description of TPC's current law and current policy baselines, see <http://www.taxpolicycenter.org/T11-0270>

(2) Includes both filing and non-filing units but excludes those that are dependents of other tax units. Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see <http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) Includes tax units with a change in federal tax burden of \$10 or more in absolute value.

(4) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.

(5) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.

(1) Calendar year. Baseline is current policy. Proposal would revert the Child Tax Credit, Earned Income Tax Credit, and Child and Dependent Care Tax Credit to pre-EGTRRA tax law. For the CTC, the proposal would not allow the credit against the AMT, decrease the per child amount to \$500, and only allow refundability under the Full Refundability for Excess Dependents provision. For the EITC, the proposal would limit the credit by AMT liability, calculate EITC using a modified form of AGI, remove the addition to the plateau for married couples filing jointly, and not allow special rules for tax units with three or more children. For the CDCTC, the per child amount would decrease to \$2,400, the maximum credit rate would decrease to 30 percent, and the phase down structure would change. For a description of TPC's current law and current policy baselines, see <http://www.taxpolicycenter.org/T11-0270>

(2) Includes both filing and non-filing units but excludes those that are dependents of other tax units. Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see <http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) Includes tax units with a change in federal tax burden of \$10 or more in absolute value.

(4) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.

(5) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.
