Source: Urban-Brookings Tax Policy Center Microsimulation Model (version 0305-2).

(1) Calendar year. Baseline is current law. The maximum credit rate would be increased from 35 percent to 50 percent. The credit rate would be reduced by one percentage point for each \$2,000 (or fraction thereof) by which AGI exceeds \$15,000. The credit would be available regardless of tax liability.

(2) Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see <http://www.taxpolicycenter.org/TaxModel/income.cfm>

(3) Includes both filing and non-filing units. Tax units that are dependents of other taxpayers are excluded from the analysis.

(4) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.

(5) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.
