Source: Urban-Brookings Tax Policy Center Microsimulation Model (version 0305-3A).
(1) Calendar year. Baseline is current law. Under the proposal, the top two statutory individual income tax rates would be rolled back to 36 and 39.6 percent from their current-law values of

33 and 35 percent.
(2) Tax units with negative cash income are excluded from the lowest income class but are included in the totals. For a description of cash income, see
http://www.taxpolicycenter.org/TaxModel/income.cfm
(3) Includes both filing and non-filing units. Tax units that are dependents of other taxpayers are excluded from the analysis.
(4) After-tax income is cash income less: individual income tax net of refundable credits; corporate income tax; payroll taxes (Social Security and Medicare); and estate tax.
(5) Average federal tax (includes individual and corporate income tax, payroll taxes for Social Security and Medicare, and the estate tax) as a percentage of average cash income.
